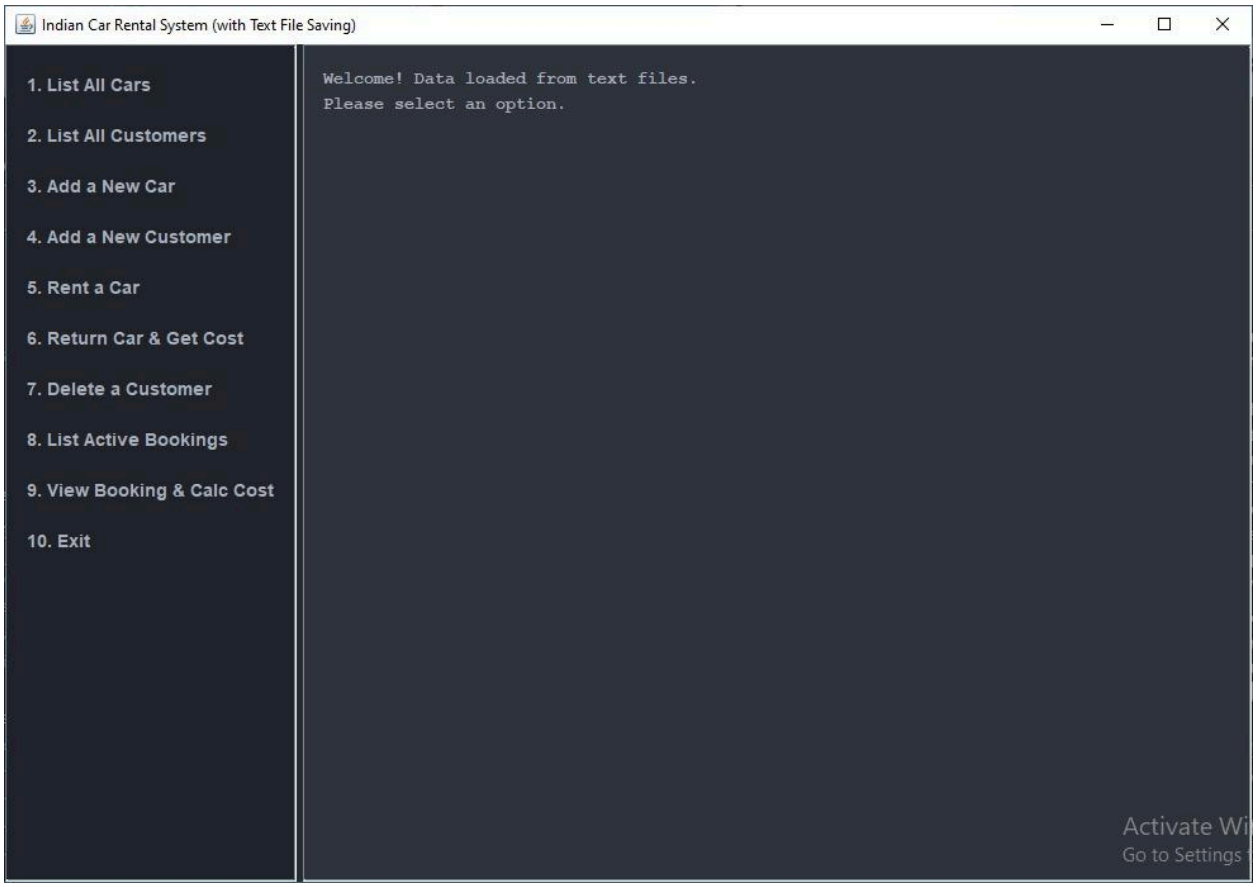
Computer Science Project

Overview



A Management Information System (MIS) which saves data and simply yet effectively handles the core and basic functionalities of Car Rental Businesses like Ola, Uber, Rapido.

Goals

1. **Using Java and its services like swing, making a car Rental service application for pc.**
2. **Making it simple yet effective with proper functioning and data saving capabilities**.

Specifications

1. ***It has separate windows for the following things***
    a. ***List of cars***
    b. ***List of all active customers on our application***
    c. ***Adding a new car***
    d. ***Adding a new customer***
    e. ***Renting a car***
    f. ***Returning a car with total cost calculation***
    g. ***Deleting a customer***
    h. ***Listing active bookings***
    i. ***Calculating costs mid booking for better finance management***
    j. ***Exit***

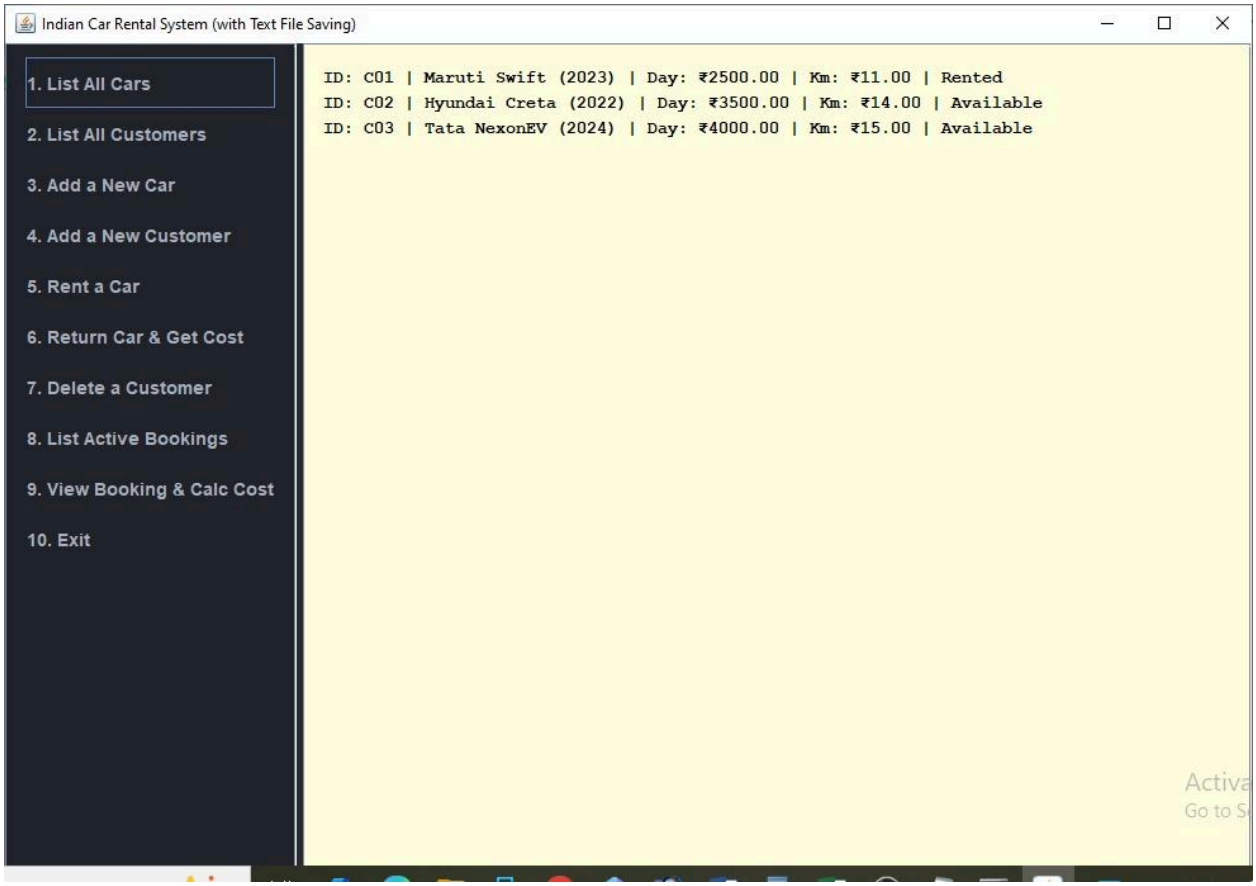
2. It has an opening screen which makes it look like a real world pc application.

3. It Saves all the data itself ensuring key data in your application is not lost.

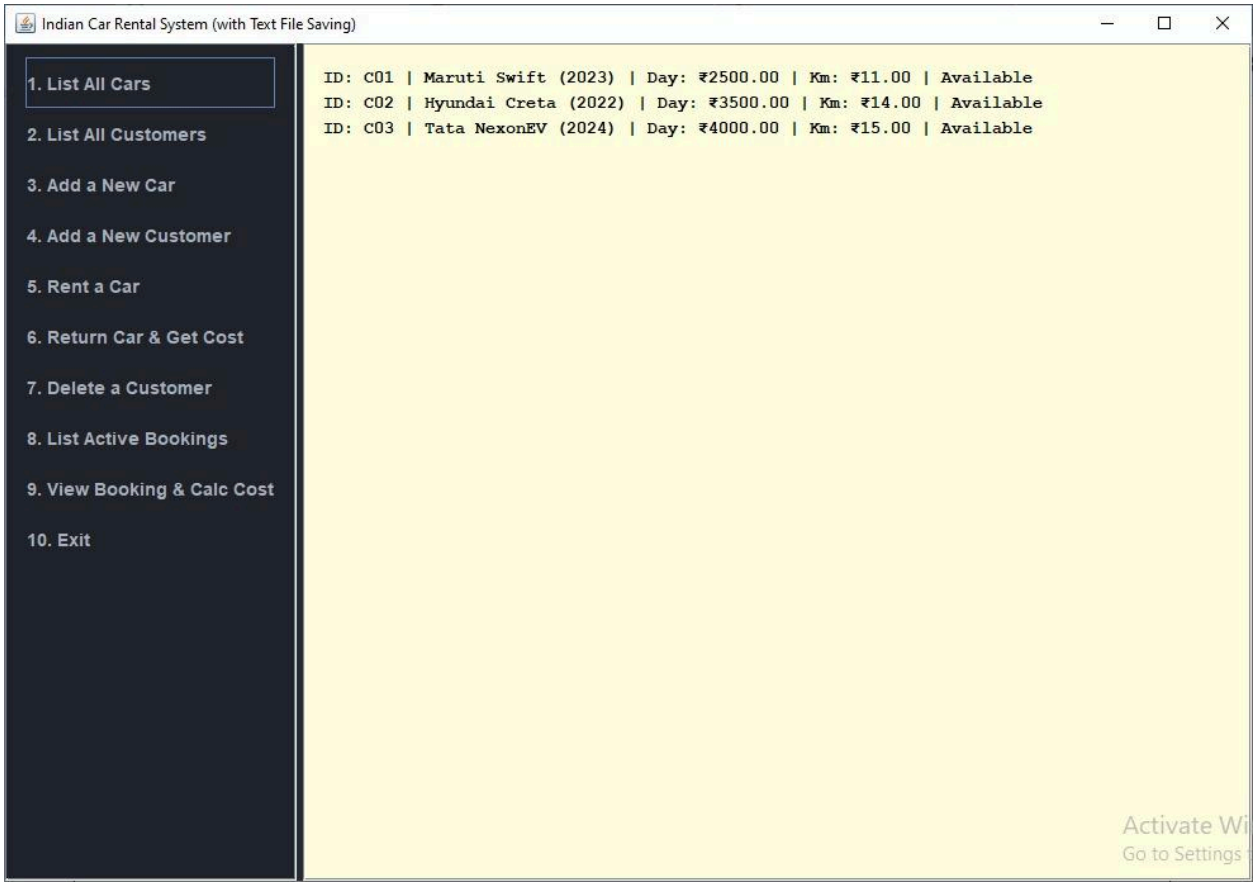
4. We have full freedom in adding customers and cars and deleting previous customers if they cancel their plans of renting a car.

5. We can calculate the cost midway to be fully sure about the amount we have to pay at the end. It also has a special feature which calculates cost itself when a customer return a car based on the days the car has been rented and kilometers the car has travelled.

List of Cars whicb also shows if a car is rented



List of Cars



Indian Car Rental System (with Text File Saving)
